

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

CONTENTS

<i>The Photochemistry of the Future:</i> PROFESSOR GIACOMO CIAMICIAN	385
<i>The First International Eugenics Congress:</i> PROFESSOR RAYMOND PEARL	395
<i>Industrial Education in the Philippines</i>	396
<i>Graduates from American Colleges and Universities</i>	397
<i>The Harpswell Laboratory</i>	397
<i>Scientific Notes and News</i>	398
<i>University and Educational News</i>	400
<i>Discussion and Correspondence:—</i>	
<i>The Policy of the Geological Survey:</i> DR. GEO. OTIS SMITH. <i>School Grades—to What Type of Distribution shall they conform?</i> DR. A. P. WEISS	401
<i>Scientific Books:—</i>	
<i>Colman on Nature's Harmonic Unity:</i> PROFESSOR ARNOLD EMCH. <i>Case's Revision of the Amphibia and Pisces of the Permian of North America:</i> DR. MAURICE G. MEHL....	407
<i>Notes on Infectious Abortion in Cattle:</i> DR. FRANK M. SURFACE	409
<i>Special Articles:—</i>	
<i>The Effects of Alkaloids on the Development of Fish (<i>Fundulus</i>) Embryos:</i> DR. J. F. McCLENDON. <i>On the Relationship between the Bilateral Asymmetry of the Unilocular Fruit and the Weight of the Seed which it produces:</i> DR. J. ARTHUR HARRIS. <i>Heat Conductivity of Crystals:</i> DR. R. W. CLARK. <i>Some Curious Cases of Selective Reflection in Ultra-violet Light:</i> GUSTAVE MICHAUD	412

MSS. intended for publication and books, etc., intended for review should be sent to the Editor of SCIENCE, Garrison-on-Hudson, N. Y.

THE PHOTOCHEMISTRY OF THE FUTURE¹

MODERN civilization is the daughter of coal, for this offers to mankind the solar energy in its most concentrated form; that is, in a form in which it has been accumulated in a long series of centuries. Modern man uses it with increasing eagerness and thoughtless prodigality for the conquest of the world and, like the mythical gold of the Rhine, coal is to-day the greatest source of energy and wealth.

The earth still holds enormous quantities of it, but coal is not inexhaustible. The problem of the future begins to interest us, and a proof of this may be seen in the fact that the subject was treated last year almost at the same time by Sir William Ramsay before the British Association for the Advancement of Science at Portsmouth and by Professor Carl Engler before the Versammlung deutscher Naturforscher und Aerzte at Karlsruhe. According to the calculations of Professor Engler Europe possesses to-day about 700 billion tons of coal and America about as much; to this must be added the coal of the unknown parts of Asia. The supply is enormous but, with increasing consumption, the mining of coal becomes more expensive on account of the greater depth to which it is necessary to go. It must therefore be remembered that in some regions the deposits of coal may become practically useless long before their exhaustion.

Is fossil solar energy the only one that may be used in modern life and civilization? That is the question.

¹ General lecture before the International Congress of Applied Chemistry, New York, September 11, 1912.
